

AWS – Account

Aws cloud is world's largest cloud service provider platform. In order to get certified with AWS Certified Solution Architect – Associate Certification. We may or may not need an AWS account

In this Github Repo you can find my personal notes on each topic which is important from the exam point of view and It is suggested to have practical experience on working and using cloud services of AWS.

In order to create Account in AWS please follow the below steps:

- Go to AWS official website (eg: <https://aws.amazon.com/>)
- Go to Sign in to the console button in top right corner
- Go to Create Account
- Fill all the required information
- Fill your credit card details.
- Then click to create Account and sign it to the **Root User** from your mail id and password

There are many services which can cost you a bit but do not worry we will be studying and experiencing only those services which are free and can get you a AWS Certification of Solution Architect – Associate.

All the Best

Let's get started .
